

SURFOX™ 305 MIG & TIG

The industry’s safest and fastest MIG & TIG weld cleaning system

The SURFOX™ 305 is our patented electrochemical weld cleaning system for stainless steel and aluminum. It quickly and easily removes heat tint from the heat-affected zone of MIG, TIG and spot welds, cleaning the surface and allowing passivation on stainless steel to begin without altering the surface finish. The integrated tank and flow-through system ensures the electrolyte solution is delivered directly to the workpiece, minimizing the potential for spillage or cross-contamination. The dynamic current control also ensures that the electrical current will not cause micropitting on the surface.

Features & benefits:

- Switchable output: AC Mode: cleaning & marking - DC Mode: polishing & etching
- Ability to clean larger and hard to reach areas with our new brushes
- The cleaning liquid is delivered automatically to the cleaning tip by an integrated pump system – without spills, just the right amount and without stopping the cleaning action
- Cleaning a typical weld at a speed of 5 feet/minute with no scrubbing or mechanical action required
- Built-in fume elimination system (requires a compressed air line)
- Compatible with all SURFOX electrolyte cleaning solutions
- Uses **nitric and hydrofluoric acid free** SURFOX electrolyte solutions
- Permanent marking on aluminum, stainless steel, and titanium surfaces
- **The use of SURFOX systems is a recognized method for achieving chemical passivation on Stainless Steel Parts, as defined by the ASTM A967 specification.**
